

# The Hospitality Committee for United Nations Delegations

is very pleased to invite you to a special talk by

**Dr. William Harcourt-Smith**

of the American Museum of Natural History on

*Footprints in Time:*

*New Discoveries About Human Evolution & Why They Matter*

Wednesday, December 2, 2020

4:00 P.M.

Few things are as short-lived as footprints – usually. But once in a great while, nature surprises us and preserves footprints that give us a glimpse of life thousands of years ago. “This is the closest we’re going to get to seeing how they lived, short of having a video recording,” says noted expert Dr. William Harcourt-Smith. The human story – *our* story – stretches back through time longer than most of us can imagine.

Come learn more about it when Dr. Harcourt-Smith speaks about human evolution and what the ancient footprints he has studied can tell us.

**Dr. William Harcourt-Smith** is Research Associate, Division of Paleontology, American Museum of Natural History, and Associate Professor in Anthropology, Lehman College, City University of New York, and has appeared on Nova, Science Goes to the Movies, and various documentaries.
